

## Fort McMurray Bucket Truck Training

Fort McMurray Bucket Truck Training - The bucket truck training program is a program which is intended to efficiently train qualified operators so they could reduce the possibility of incident and personal injury while working in close proximity to or with bucket trucks or likewise referred to as vehicle-mounted aerial work platform. An aerial lift device is whichever vehicle-mounted device, telescoping or articulating, or both, which is used to position personnel to reach locations that will otherwise be not accessible. Aerial lift devices are made use of in order to elevate personnel to above-ground work sites.

The goal of the program is to provide operators with the skills, knowledge, abilities, and training materials needed to learn to operate vehicle-mounted aerial work platforms effectively and safely.

The program includes a classroom training session and a hands-on training session. To be able to become certified, participants must be successful in both parts. A full-size certificate and a wallet-size certificate would be given upon completing the program.

The kinds of lifts examined in the program include Aerial lift devices are often made of metal, wood, reinforced plastic, fiberglass or other materials.

### Definitions

Articulating boom platform: many hinged boom parts.

Extensible boom platform: has an extensible or telescopic boom.

Platform: section of the aerial device which is designed to carry employees.

Mobile unit: any aerial device along with its parts such as vehicle and related machine.

Employers have the responsibility to make certain their employee receive correct training before operating aerial devices. Workers must make certain they likewise obtain the required training and that they do not operate lift devices if they are not authorized to do so. Workers should ensure that they are wearing the proper protective equipment if working from the platform.

The course content used in the bucket truck training program includes the operation of the vehicle-mounted aerial work platform, safe operating practices, pre-shift inspections, use of emergency controls, lifting capacity, and administering theory and practical tests. Operators would learn rules under the local and federal regulations.
